

SPLASHTACULAR®
Innovators of Fun.

ALWAYS HERE. ALWAYS SAFE. ALWAYS ORIGINAL.

Looking around our office, I see a lot of big kids.

Sure, we hold patents, professional licenses but we are still just big kids brimming with imagination to create something we cannot wait to ride.

We use our youthful imagination to our advantage. Since 1994 we have designed, engineered, manufactured, and installed over 1,500 waterpark attractions and 3,000 waterslides, globally.

We are the largest US-based waterslide manufacturer, because we build the safest waterslides and attractions without abandoning the thrill that drives us.

Yet, unlike other companies, our vast portfolio does not inhibit us. Our team is always available the first time you reach out.

So, tell us your dream and together we'll make something they've never seen before!

**Alex
Weidman**
President

Splashtacular's Advantage

Splashworx® Design Software

Nothing on the market met our picky demands, so we developed our own proprietary design software, Splashworx®. Now, design tweaks and changes take seconds, not hours. That's more time for amazing designs, versatility, and collaboration.

Ride Path Analysis

Finite ride path analysis predicts what was once unpredictable by examining riders' weights and eliminating guesswork for the smoothest, fastest ride possible.

2x

Double the Spray Features

Our product incorporates double the amount of spray feature per rail, which means more fun and longer play time for your guests.

More Color Options

With 188 different colors, you're sure to find a scheme that fits with your current theme and stands out from other parks.

Full Size Waterslides

Larger radii slide sections means that our play units feature full-sized commercial waterslides, that can accommodate children AND adults.

Feature Flow Control

Our play units contain individually plumbed spray features giving the ability to tune each feature exclusively.

STAINLESS STEEL FRAMES.

Our play units are made entirely from stainless steel. Unlike other products on the market comprised of galvanized steel or stainless steel only on areas submerged in water, we've built our products with the highest level of corrosion resistance in mind. This means our products are easier to maintain and reduced maintenance costs in the long run.

Contour Series

Ideal for a modern indoor municipal waterpark, our new Contour Series offers a sleek, compact design without losing any of the fun found with our Classic units.

Aquatic Play Units

Classic Series

Double the features, double the deck space, and with an impactful size presence, our Classic Series take interactive play to another level.

And, did we mention they are fully compliant with ADA standards?
